

HANG ON Table

Product sheet — 2026

+Halle®

HANG ON Table is an unconventional table system designed to rethink and simplify the architecture of a table. Defined by a pared-back extruded aluminium profile, the system reduces the table to its essential elements while allowing functionality to be added where needed through a series of customisable accessories.

Designed for public environments such as restaurants, canteens, airports, events, offices and other high-traffic spaces, HANG ON responds to the demands of contemporary shared environments. The system promotes flexibility, efficient use of space, and easy maintenance, while enabling users to adapt the table to different needs with a simple hanging action.

Designed by Fengfan Yang

Fengfan Yang Design is a Germany-based industrial design studio with a multicultural background. The studio approaches design through the lens of product typology. Its work consistently balances practicality, simplicity, and versatility across different contexts and use scenarios.

Table — 2 sizes

HANG ON Table comes in two lengths:
160 cm / 220 cm
